Valley	10/9	13/11	14/12	14/12	14/12	13/12	13/12
Freezing Level*	1800m	2000m	1700m	1900m	2000m	2100m	2100m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Feeling chilly on summits, especially later in the day as winds strengthen.

Forecast for Tuesday 01 Sep 2020

Weather: Thick cloud arriving in the early hours to bring dull and drizzly conditions, these lasting through much of the morning. A drier, perhaps brighter afternoon looks likely although there is some uncertainty in the forecast at this stage.

Maximum wind: Southerly 15-20mph gusting 30mph.

Chance of cloud free mountain/hill tops above 700m: Almost no chance through morning with thick cloud as low as 300m at times. Improving 40% through afternoon as cloud lifts to an uncertain extent.

Visibility: Widely limited to several hundred meters at even modest heights through much of the morning, hampering navigation. Improving on lower slopes through afternoon and perhaps some breaks developing on summits too.

Temperature: **Valleys:** 10-12C rising 15C.
At 700m: 10-12C.
Freezing level: Well above summits.
